PREVENTION PROTECTION PERFORMANCE

PROTECT YOUR ANKLE FROM ROLLING INJURIES WHEN ON THE FIELD

From pounding on the pavement or slipping in a pot hole to jumping and cutting on the field or landing incorrectly, ankle injuries happen to many athletes in a variety of ways.

A sprained ankle is one of the most common sporting injuries and involves twisting or rolling the ankle in a direction not within its usual range of motion.

Many studies suggest that compression and bracing will help prevent injury, speed up the recovery process as well as prevent re-injury to the ankle once you're back on the field.

DONJOY®

PROTECTING YOUR KNEES ON AND OFF THE FIELD

Running, kicking, and changes in direction at high speeds can lead to knee ligament or cartilage tears. Athletes are also at risk of falling or colliding with each other, which can cause unnatural force on the knee joint.

Knee injuries have the potential to take an athlete out of the game for an entire season. It's important for athlete to warm up by stretching and performing light exercises prior to a game. A knee brace for athlete is often recommended to help prevent knee injuries and provide additional stability and support.

STABILAX

HINGED KNEE BRACE IS IDEAL FOR PREVENTING LIGAMENT INJURIES AND PROVIDING MAXIMUM MEDIAL AND LATERAL SUPPORT

FEATURES & BENEFITS

HOW TO PREVENT PAINFUL TENNIS/GOLF ELBOW

Golfer's elbow refers to pain that generates in bony bump in the inside of your arm and tennis's elbow refer to the pain occurs on the outside of the elbow. It is often caused by repetitive movement of the arm and may happen during sports activities, such as golfing and tennis.

THE BEST THING TO DO WITH TENNIS/GOLF ELBOW IS TO PREVENT IT BEFORE IT STARTS.

Make sure to warm up and stretch before participating in activities that involve the elbow. Follow appropriate techniques during sports and wear tennis elbow braces on each arm. They can help give your elbows extra support to help prevent irritation to the tendons in the elbow joint.

AIRCAST ARMBAND
